

# Oldham County LiDAR and Sinkhole Map

This map shows the mapped sinkholes in Oldham County, Kentucky.  
Sinkholes are widespread throughout the major limestone areas of Kentucky.  
Some sinkholes can be hazardous, especially if there is little sign on the land surface  
and they develop after roads or buildings are constructed.  
The basemap is a LiDAR hillshade image, overlaid with a state road network and  
the corporate boundary's of the incorporated towns.

The data was compiled through the Kentucky Geological Survey's hard drives.  
The LiDAR data comes state LiDAR database accessed through the KGS.  
The sinkhole polygons were mapped by Junfeng Zhu. The road network comes from KYDOT.  
Spatial Reference System: Kentucky State Plane Single Zone, US Feet (EPSG: 3089)

Map composed for the New Maps Plus Program, MAP671.  
Map composed by Max Hammond III, Dec. 2015.
